

HEWLETT-PACKARD

# HP-67/HP-97

Users' Library Solutions

EE (Lab)

## INTRODUCTION

In an effort to provide continued value to its customers, Hewlett-Packard is introducing a unique service for the HP fully programmable calculator user. This service is designed to save you time and programming effort. As users are aware, Programmable Calculators are capable of delivering tremendous problem solving potential in terms of power and flexibility, but the real genie in the bottle is program solutions. HP's introduction of the first handheld programmable calculator in 1974 immediately led to a request for program **solutions** — hence the beginning of the HP-65 Users' Library. In order to save HP calculator customers time, users wrote their own programs and sent them to the Library for the benefit of other program users. In a short period of time over 5,000 programs were accepted and made available. This overwhelming response indicated the value of the program library and a Users' Library was then established for the HP-67/97 users.

To extend the value of the Users' Library, Hewlett-Packard is introducing a unique service—a service designed to save you time and money. The Users' Library has collected the best programs in the most popular categories from the HP-67/97 and HP-65 Libraries. These programs have been packaged into a series of low-cost books, resulting in substantial savings for our valued HP-67/97 users.

We feel this new software service will extend the capabilities of our programmable calculators and provide a great benefit to our HP-67/97 users.

## A WORD ABOUT PROGRAM USAGE

Each program contained herein is reproduced on the standard forms used by the Users' Library. Magnetic cards are not included. The Program Description I page gives a basic description of the program. The Program Description II page provides a sample problem and the keystrokes used to solve it. The User Instructions page contains a description of the keystrokes used to solve problems in general and the options which are available to the user. The Program Listing I and Program Listing II pages list the program steps necessary to operate the calculator. The comments, listed next to the steps, describe the reason for a step or group of steps. Other pertinent information about data register contents, uses of labels and flags and the initial calculator status mode is also found on these pages. Following the directions in your HP-67 or HP-97 **Owners' Handbook and Programming Guide**, "Loading a Program" (page 134, HP-67; page 119, HP-97), key in the program from the Program Listing I and Program Listing II pages. A number at the top of the Program Listing indicates on which calculator the program was written (HP-67 or HP-97). If the calculator indicated differs from the calculator you will be using, consult Appendix E of your **Owner's Handbook** for the corresponding keycodes and keystrokes converting HP-67 to HP-97 keycodes and vice versa. No program conversion is necessary. The HP-67 and HP-97 are totally compatible, but some differences do occur in the keycodes used to represent some of the functions.

A program loaded into the HP-67 or HP-97 is not permanent—once the calculator is turned off, the program will not be retained. You can, however, permanently save any program by recording it on a blank magnetic card, several of which were provided in the Standard Pac that was shipped with your calculator. Consult your **Owner's Handbook** for full instructions. A few points to remember:

The Set Status section indicates the status of flags, angular mode, and display setting. After keying in your program, review the status section and set the conditions as indicated before using or permanently recording the program.

**REMEMBER!** To save the program permanently, **clip** the corners of the magnetic card once you have recorded the program. This simple step will protect the magnetic card and keep the program from being inadvertently erased.

As a part of HP's continuing effort to provide value to our customers, we hope you will enjoy our newest concept.

## TABLE OF CONTENTS

WIRE TABLE . . . . .	1
Calculates useful wire parameters.	
OHM'S LAW . . . . .	5
Calculates the missing two values among E, I, R, and P.	
REACTANCE CHART (NINE EQUATIONS) . . . . .	9
Interchangeable solution among f, L, C, $X_C$ , and $X_L$ .	
COIL CALCULATIONS . . . . .	14
Calculates self-inductance of four types of inductors.	
COMPLEX IMPEDANCE CALCULATOR - AC CIRCUIT CALCULATOR . . . . .	19
Gives your calculator a complex stack.	
WYE-DELTA TRANSFORMATIONS . . . . .	24
Given one, it computes the other.	
RC TIMING . . . . .	29
Interchangeable solution among R, C, $V_1$ , $V_2$ , $V_i$ , and t.	
SERIES R-L-C CIRCUIT ANALYSIS PROGRAM . . . . .	34
Determines the characteristics and performance of the series R-L-C circuit.	
PASSIVE HIGH AND LOWPASS COMPOSITE FILTER DESIGN . . . . .	39
Computes component values for a prototype "T" or "PI", high or lowpass filter. Given "m", computes component values for an m-derived filter section.	
"L" ATTENUATOR (GENERATOR IMPEDANCE GREATER THAN LOAD IMPEDANCE) . . . . .	44
Computes resistor values needed to realize desired pads.	
1% RESISTOR VALUE SUBROUTINE . . . . .	48
Subroutine to find the nearest available 1% resistance.	
WHEATSTONE BRIDGE . . . . .	52
Computes the missing impedance.	

# Program Description I

Program Title WIRE TABLE

Contributor's Name W. J. HOPKINS

Address 13668 Sunburst Street

City Arleta

State CA

Zip Code 91331

Program Description, Equations, Variables Calculates the wire diameter, circular area and linear resistance given any wire (AWG) gage from 0 up. Area and diameter are in circular mils (.001 inch) Will also find smallest usable AWG given either 1) wire length and max allowable resistance, or 2) required cross-sectional area and allowable current. By keying in one variable, the effect of changing the other may be seen. The following approximate equation is used:

$$A = 105530 \times 0.79306^{\text{AWG}}$$

$$R = r l / A$$

A=Area in c.m. r=resistivity for copper=10575 ohm-c.m./1000ft

l=length of wire in ft. R=total resistance in ohms AWG=wire gage

To use this program for other than copper wire, insert the appropriate value for r in program steps 7-11 and 52-57. Value used in steps 52-57 is resistivity per foot, steps 7-11 use resistivity per 1000 feet.

Operating Limits and Warnings No safety design margins are built in.

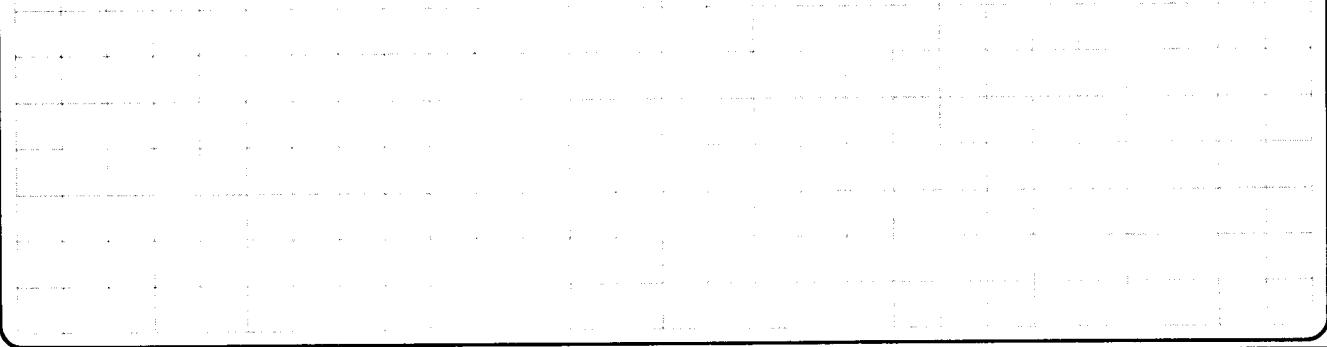

Accuracy of area equation is within .02% for large wire and  $\pm 2$  mils for small wire. Side two may be left unprotected to enable recording of data.

Registers 0-9, S1- S9 and I are available for user storage

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. # Program Description II

**Sketch(es)**

**Sample Problem(s)** (A) determine the cross-sectional area, diameter and resistance per 1000 feet for 22 AWG wire.

(B) determine the smallest usable wire size for a 5000 foot run when the max allowable resistance is 14.0 ohms.

(C) determine the smallest usable wire gage if the cross-sectional area/amp must be 850 c.m. and carry 7.6 amps.

**Solution(s)**

(A): 22 (A) 22

(C) 642.8 c.m.

(D) 25.4 m.

(B) 16.4502 ohms/Kft

(B): 5000 (E) 5000.0 ft

14 (b) 14.0000 ohms

(a) 14 AWG

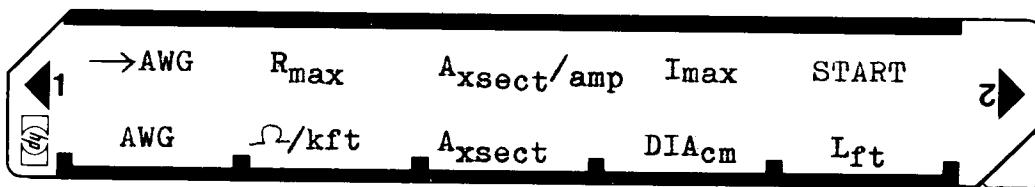

(C): 850 (c) 850.00 c.m./Amp

7.6 (d) 7.60 Amps

(a) 12 AWG

# Program Description I

**Program Title** OHMS LAW

**Contributor's Name** Jack B. Buster

**Address** P. O. Box 8062

**City** Anchorage, **State** Alaska **Zip Code** 99508

**Program Description, Equations, Variables** Given two variables (Either watts, ohms, volts or amps) the program will calculate the other two according to one of the following formulas:

$$I = \frac{E}{R} \quad P = I^2 R$$

$$P = IE \quad R = \frac{E^2}{P}$$

## Operating Limits and Warnings

NONE

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

# Program Description II

**Sketch(es)**

--

**Sample Problem(s)**

(1) Given 12 amps at 78 volts, find watts and resistance.

(2) Calculate power consumption at 12 volts for 1/4 to 1 ohm at 1/4 ohm intervals.

**Solution(s) Keystrokes:**

(1) [A] [1] [2] [C] [7] [8] [D] [B] = 936 watts [E] = 6.5 ohms

(2) [A] [1] [2] [D] [.] [2] [5] [E] = 576 watts [.] [5] [B] [B] = 288 watts

[.] [7] [5] [E] [B] = 192 watts [1][E] [B] = 144 watts

# Program Description II

**Sketch(es)**

**Sample Problem(s)**

- (1) What is the resonant frequency of a tank circuit consisting of a 250 pf capacitor and a 5 microhenry inductor?
- (2) At what frequency does a 100 pf capacitor have a reactance of 100 ohms?
- (3) At what frequency does a .02 henry inductor have a reactance of 16 ohms?
- (4) What is the reactance of a 250 pf capacitor at 3.2 Mhz?
- (5) What is the reactance of a 10 henry inductor at 60 hz?
- (6) What is the value of an inductor whose reactance is 4 ohms at 300 hz?
- (7) What is the value of an inductor that resonates with 250 pf at 3.2 Mhz?
- (8) What is the value of a capacitor whose reactance is 4 ohms at 300 hz?
- (9) What is the value of a capacitor that resonates with 12 h at 120 hz?

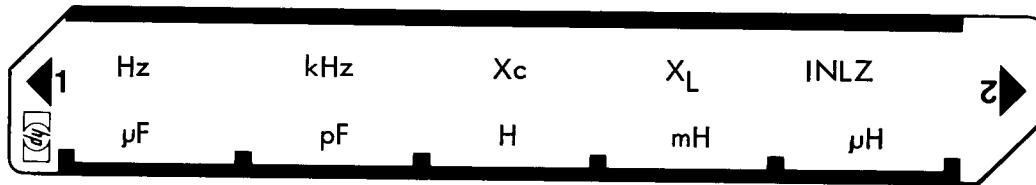

**Solution(s)**

- (1)  $250 \text{ pf} & 5 \mu\text{h} = 4 \cdot 501.581.58 \text{ Hz} \text{ or } 4 \cdot 501.582 \text{ KHz}$
- (2)  $100 \text{ ohms} & 100 \text{ pf} = 15.915.494.31 \text{ hz} = 15.915.494 \text{ KHz}$
- (3)  $16 \text{ ohms} & .02 \text{ hy} = 127.32 \text{ hz}$
- (4)  $3.2 \text{ Mhz} & 250 \text{ pf} = 198.94 \text{ ohms}$
- (5)  $60 \text{ hz} & 10 \text{ h} = 3.769.91$
- (6)  $4 \text{ ohms} & 300 \text{ hz} = 2.1221 \text{ mH}$
- (7)  $3.2 \text{ Mhz} & 250 \text{ pf} = 9.894.6 \mu\text{h}$
- (8)  $4 \text{ ohms} & 300 \text{ hz} = 132.629.12 \mu\text{farads}$
- (9)  $120 \text{ hz} & 12 \text{ h} = 0.146.59 \mu\text{farads}$

# Program Description I

Program Title COIL CALCULATIONS

Contributor's Name RICHARD L. KENNEDY

Address 5633 HEMMINGWAY

City EL PASO

State TEXAS

Zip Code 79924

**Program Description, Equations, Variables** PROGRAM CALCULATES SELF-INDUCTANCE OF FOUR TYPES OF INDUCTORS, OR REQUIRED NUMBER OF TURNS FOR THREE TYPES WHEN THE REMAINING PARAMETERS ARE GIVEN.

EQUATIONS USED ARE:

$$L = \frac{r^2 N^2}{9r + 108}$$

$$N = \frac{\sqrt{L(9r + 108)}}{r} \quad \left. \right\} \text{FOR SINGLE-LAYER COIL}$$

ALL DIMENSIONS ARE

IN INCHES. L IS IN

MICROHENRIES. f IS IN

HERTZ. p IS IN OHM-CM

$\times 10^{-6}$ , N IS THE NUMBER

OF TURNS. S WAS DEFINED

IN REFERENCE 2 BY A

GRAPH. TWO EQUATIONS

WERE FOUND TO FIT FOR

$\chi \leq 4.5$  AND  $\chi \geq 4.5$ .

$$L = \frac{0.8 r^2 N^2}{6r + 98 + 10b}$$

$$N = 1.118 \frac{\sqrt{L(6r + 98 + 10b)}}{r} \quad \left. \right\} \text{FOR MULTI-LAYER COIL}$$

$$L = \frac{r^2 N^2}{8r + 11b}$$

$$N = \frac{\sqrt{L(8r + 11b)}}{r} \quad \left. \right\} \text{FOR SINGLE-LAYER SPIRAL COIL}$$

$$L = 0.00508L \left( \ln \frac{4L}{d} - 1 + \mu \delta + \frac{d}{2L} \right) \quad \text{FOR STRAIGHT WIRE}$$

WHERE  $\mu = 1$  FOR COPPER,  $\delta = 0.25 - \chi^2 / 202.5$  FOR  $\chi \leq 4.5$ ,  $\delta = 10^{-(\log_{10} \chi + 0.155)}$  FOR  $\chi \geq 4.5$ , AND  $\chi = 0.3569 d \sqrt{\mu / p} = 0.272 d \sqrt{f}$  FOR COPPER WIRE

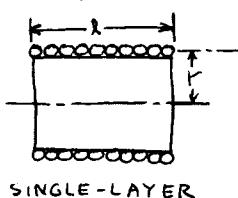

**Operating Limits and Warnings** EQUATIONS USED ARE APPROXIMATIONS ACCURATE TO ABOUT 1% FOR MOST SMALL AIR-CORE COILS. ACCURACY OF FIRST TWO SETS DETERIORATES FOR WINDING LENGTH MUCH DIFFERENT FROM THE DIAMETER ( $2R \ll l$  OR  $l \ll 2R$ ). EQUATIONS ARE VALID ONLY FOR NON-FERROUS MATERIALS, EXCEPT THAT THE EQUATION FOR INDUCTANCE OF A STRAIGHT WIRE IS FURTHER LIMITED TO COPPER WIRE, UNLESS A DIFFERENT VALUE OF RESISTIVITY (p) IS USED TO DEFINE  $\chi$ .

- Sample Problem(s)**
1. GIVEN  $r, l, N$ , CALCULATE  $L$  FOR SINGLE - LAYER COIL.
  2. GIVEN  $r, l, L$ , CALCULATE  $N$  FOR SINGLE - LAYER COIL.
  3. GIVEN  $r, l, b, N$ , CALCULATE  $L$  FOR MULTI-LAYER COIL.
  4. GIVEN  $r, l, b, L$ , CALCULATE  $N$  FOR MULTI-LAYER COIL.
  5. GIVEN  $r, b, N$ , CALCULATE  $L$  FOR SPIRAL COIL.
  6. GIVEN  $r, b, L$ , CALCULATE  $N$  FOR SPIRAL COIL.
  7. GIVEN  $l, d, f$ , CALCULATE  $L$  FOR STRAIGHT WIRE.

**DATA:**  $r = 0.5$  INCHES FOR ALL PROBLEMS USING THIS QUANTITY.

$l = 2.0$  INCHES FOR ALL PROBLEMS USING THIS QUANTITY.

$b = 0.8$  INCHES FOR ALL PROBLEMS USING THIS QUANTITY.

$N = 50$  TURNS FOR ALL PROBLEMS USING THIS QUANTITY.

$L = 100 \mu\text{H}$  (MICROHENRIES) FOR ALL PROBLEMS USING THIS QUANTITY.

$d = 0.02010$  INCHES FOR PROBLEM 7 (#24 AWG WIRE)

Solution(s)	1. .5 [ENT↑] 2 [ENT↑] 50 [A]	→ 25.5102 ( $L, \mu\text{H}$ )
	2. .5 [ENT↑] 2 [ENT↑] 100 [F] [A]	→ 98.9949 ( $N$ , TURNS)
	3. .5 [ENT↑] 2 [ENT↑] .8 [ENT↑] 50 [B]	→ 17.2414 ( $L, \mu\text{H}$ )
	4. .5 [ENT↑] 2 [ENT↑] .8 [ENT↑] 100 [F] [B]	→ 120.4123 ( $N$ , TURNS)
	5. .5 [ENT↑] .8 [ENT↑] 50 [C]	→ 48.8281 ( $L, \mu\text{H}$ )
	6. .5 [ENT↑] .8 [ENT↑] 100 [F] [C]	→ 71.5542 ( $N$ , TURNS)
	7. 2 [ENT↑] .0201 [ENT↑] 0 [D]	→ 0.0533 ( $L, \mu\text{H}$ AT 0 Hz)
	2 [ENT↑] .0201 [ENT↑] 100 [EEX] 6 [D]	→ 0.0508 ( $L, \mu\text{H}$ AT 100 MHz)
	2 [ENT↑] .0201 [ENT↑] [EEX] 9 [D]	→ 0.0508 ( $L, \mu\text{H}$ AT 1 GHz)

# Program Description I

**Program Title** Complex Impedance Calculator - AC Circuit Calculator

**Contributor's Name** Ian A. Webb                    West Valley College  
**Address** 20621 Canyon View Dr.                    Saratoga, CA 95070  
**City** Saratoga,                                         **State** CA                                         **Zip Code** 95070

**Program Description, Equations, Variables** An AC circuit/complex number or impedance calculator that behaves the same as the HP-67/97 for real numbers. Fully automatic stack lift and exact stack movement simulating the bare HP-67/97 is provided. Functions implemented are: X and Y register exchange, 1/X, multiplication, division, addition, subtraction, enter, roll-down, STO (0-6) and RCL (0-6). 5 secondary (protected) storage locations and 2 primary (non-protected) locations are provided. Register review is possible viewing first the imaginary and then the real portion of each complex number in the simulated four-level stack.

COMPLEX SIMULATED STACK	T		Z		Y		X	
REGISTER USED	0	1	2	3	4	5	6	7
QUANTITY STORED	Imag.	Real	Imag.	Real	Imag.	Real	Imag.	Real

COMPLEX SIMULATED STACK	X		Y	
HP-67/97 STACK	x	y	z	t
QUANTITY	Real	Imag.	Real	Imag.

Registers 8 and 9 contain either the last number pair worked with or the results of the last arithmetic operation. (8 = imaginary part, 9 = real part)

**Operating Limits and Warnings** During STO and RCL operations, a number 0 through 6 must be entered during the pause operation after pressing the STO or RCL user-defined keys. A 0. is displayed as a reminder during this pause. This number indicates the storage location used.

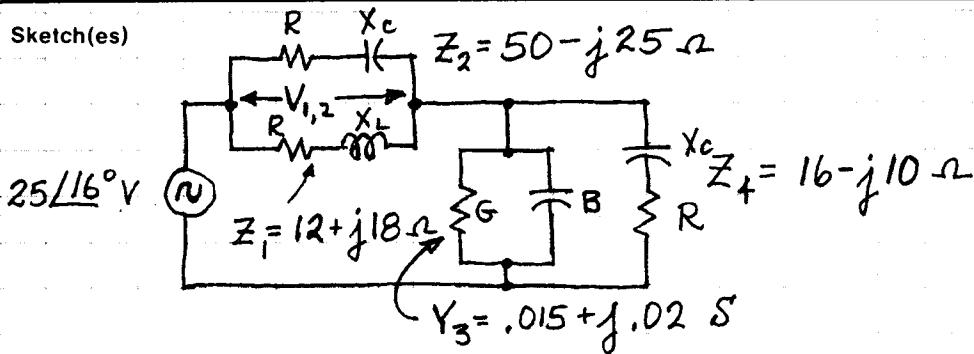

All entries must be converted to (or entered in) rectangular Real + j Imaginary format before any operations are used.

Sketch(es)

**Sample Problem(s)** Find:  $I_T$ ,  $Z_T$ , and  $V_{1,2}$  in circuit above

$$Z_T = Z_{1,2} + Z_{3,4} \quad 1/Z_{1,2} = 1/Z_1 + 1/Z_2 \quad 1/Z_{3,4} = Y_3 + 1/Z_4$$

$$I_T = V_T/Z_T$$

$$V_{1,2} = I_T \times Z_{1,2}$$

**ANSWERS FROM STEPS BELOW**

$$Z_T = 25.79 + j3.30 \Omega \quad [g] \rightarrow P \quad 26 \angle 7.29^\circ \Omega$$

$$I_T = .95 + j.15 A \quad [g] \rightarrow P \quad .96 \angle 8.71^\circ A$$

$$V_{1,2} = 13.20 + j13.15 V \quad [g] \rightarrow P \quad 18.63 \angle 44.89^\circ V$$

**Solution(s)**  $1/Z_1 : 18 \left[ E \right] 12 \left[ f \right] \left[ D \right] (.03 - j.04)$  (remember  $h \leftrightarrow y$  to view other part)

$1/Z_2 : 25 \left[ CHS \right] \left[ E \right] 50 \left[ f \right] \left[ D \right] (.02 + j.01)$ ,  $1/Z_{1,2} : (+) \left[ B \right] (.04 - j.03)$

$Z_{1,2} : (1/Z) \left[ f \right] \left[ D \right] (15.64 + j11.44)$ ,  $Y_3 : .02 \left[ E \right] .015 \left( E \right) \left[ A \right] (.02 + j.02)$

$1/Z_4 : 10 \left[ CHS \right] \left[ E \right] 16 \left( 1/Z \right) \left[ f \right] \left[ D \right] (.04 + j.03)$ ,  $1/Z_{3,4} : (+) \left[ B \right] (.06 + j.05)$ ,

$Z_{3,4} : (1/Z) \left[ f \right] \left[ D \right] (10.15 - j8.14)$  Exchange  $Z_{3,4}$  &  $Z_{1,2}$  & save  $Z_{1,2} \left[ f \right] \left[ E \right]$ ,

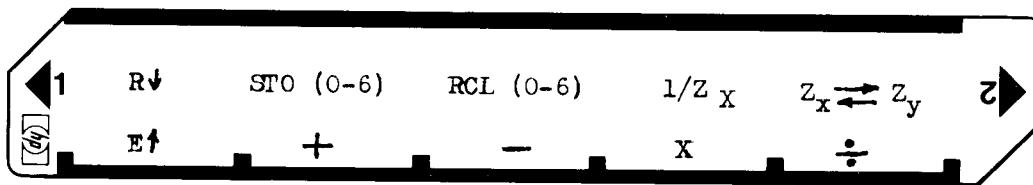

$f \left[ B \right] 1 ; Z_T : (+) \left[ B \right] (25.79 + j3.30) ; V_T : 16 \left[ E \right] 25 \left[ f \right] \left[ R \right] (24.03 + j6.89)$ ,

Exchange  $Z_T$  and  $V_T$ :  $\left[ f \right] \left[ E \right]$ ,  $I_T : (\div) \left[ E \right] (.95 + j.15)$ , RCL  $Z_{1,2} : \left[ f \right] \left[ C \right] 1$ ,

$V_{1,2} : (X) \left[ D \right] (13.20 + j13.15)$

# Program Description I

Program Title

RC TIMING

Contributor's Name

John Craig

Address

RFD 1

City

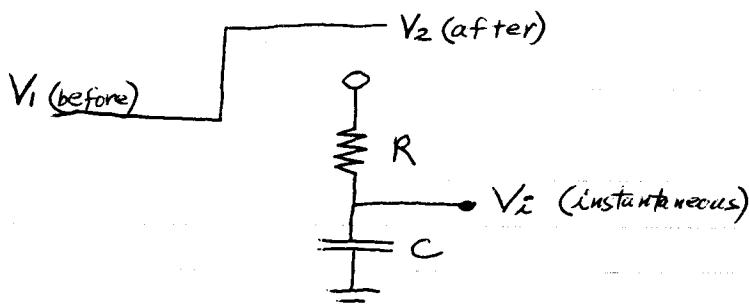

Malcolm

State Nebr

Zip Code 68402

## Program Description, Equations, Variables

Given 5 of 6 variables, the sixth value will be solved for. They are; Resistance, capacitance, Voltage before step, Voltage after step, instantaneous Voltage, and time.

A variety of design solutions can be expedited with this program. Timers, oscillators, etc., often use RC charging times.

## Operating Limits and Warnings

Extra note : For voltages across the resistor remember that  $V_R + V_C = V_{\text{applied}}$  at all times.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

## Program Description II

**Sketch(es)**

All solutions are algebraically derived from this basic formula:

$$V_i = V_1 e^{-\frac{t}{RC}} + V_2 \left(1 - e^{-\frac{t}{RC}}\right)$$

 Flag 3 indicates for each key whether data entry or a solution is desired.

**Sample Problem(s) Problem 1;**

A 555 type integrated circuit timer uses an external RC configuration for time determination. When used as a one-shot its output pulse terminates when the capacitor charges to  $2/3$  of the supply voltage. Until the pulse starts, the capacitor is shorted across, so

$V_1 = 0$ . Given a supply voltage of 12 V, a  $47\mu F$  capacitor, and you need a 1 second pulse, what size resistor should you use?

Load program,

$V_1 = 0$  (no need to enter this),  $V_2 = 12$  (key A),  $V_i = 8$  (key B),  $C = 47 \times 10^{-6}$  (key C),  $T = 1$  (key E), then  $R$  (key D) =  $19.4 K\Omega$

**Solution(s) Problem 2;**

Input voltage to an RC configuration suddenly drops from +12 VDC to -24 VDC. If  $R = 1 \text{ Meg}$  ( $1 \times 10^6$ ),  $C = 47 \mu F$  ( $47 \times 10^{-6}$ ), how long will it take for the voltage across the capacitor to reach -23 VDC?  
23 chs B,

Solution Steps: 12 fA, 24CHS A, 1eex 6 D, 47eex 6chs C, E ( $\rightarrow T$ ) yields 168 seconds

~~Sketch(s)~~

How about -22 VDC?

or -21 VDC?

etc.

22chs B, E  $\rightarrow 136$  sec.

21chs B, E  $\rightarrow 117$  sec.

# Program Description I

Program Title **SERIES R-L-C CIRCUIT ANALYSIS PROGRAM**

Contributor's Name **HARLAN ASLIN**

Address **4796 WINGATE DRIVE**

City **PLEASANTON**

State **CALIFORNIA**

Zip Code **94566**

**Program Description, Equations, Variables** Given the values of R, L, and C, the program determines the characteristics and performance of the series RLC circuit for the condition where the capacitor is initially charged. The first part of the program determines whether the circuit is underdamped, critically damped, or overdamped. This information is followed by an evaluation of the time to peak current, and the normalized value of peak current. For the underdamped case, these information are supplemented by the normalized value of capacitor voltage reversal.

The second part of the program determines circuit current as a function of time for a given capacitor initial charge voltage,  $V_c$ , and a given time step,  $\Delta t$ , specified by the user.

The relevant equations are:

underdamped

$$i(t) = \frac{V_c}{LB} e^{-\alpha t} \sin \beta t$$

$$t_p = \frac{1}{\beta} \tan^{-1} \frac{\beta}{\alpha}$$

$$\text{rev.} = e^{\frac{-\pi \alpha}{\beta}}$$

critically damped

$$= \frac{V_c}{L} t e^{-\alpha t}$$

$$= \frac{1}{\alpha}$$

$$\left[ \alpha = \frac{R}{2L}, \beta' = (\omega^2 - \alpha^2)^{1/2}, B = (\alpha^2 - \omega^2)^{1/2}, \omega = \frac{1}{(LC)^{1/2}} \right]$$

overdamped

$$= \frac{V_c}{LB} e^{-\alpha t} \sinh \beta t$$

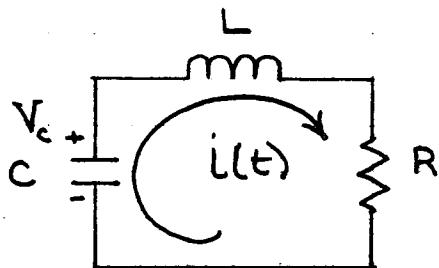

$$= \frac{1}{2B} \ln \left[ \frac{1 + \beta/\alpha}{1 - \beta/\alpha} \right]$$

This program has been verified only with respect to the numerical example given in *Program Description II*. # Program Description I

Program Title	PASSIVE HIGH AND LOW PASS COMPOSITE FILTER DESIGN		
Contributor's Name	ROBERT L. SHERMAN		
Address	808 SOUTH SARATOGA AVENUE, APT. D-206		
City	SAN JOSE	State	CA
			Zip Code 95129

**Program Description, Equations, Variables** Given the desired cut-off frequency and image impedance, the program computes the component values for a prototype "T" or "π" high or low pass filter. Given the desired frequency of infinite attenuation or the desired "m", the program will then compute the component values for an m-derived filter section based on the prototype previously computed.

### High-Pass Formulas

$$L_k = \frac{R}{4\pi f_c} \quad C_k = \frac{1}{4\pi R f_c}$$

$$L_b = \frac{L_k}{m} \quad C_a = \frac{C_k}{m}$$

$$L_a = \frac{4m}{1-m^2} L_k \quad C_b = \frac{4m}{1-m^2} C_k$$

$$m = [1 - (f_\infty/f_c)^2]^{1/2}$$

### Low Pass Formulas

$$L_k = \frac{R}{\pi f_c} \quad C_k = \frac{1}{\pi R f_c}$$

$$L_a = m L_k \quad C_b = m C_k$$

$$L_b = \frac{1-m^2}{4m} L_k \quad C_a = \frac{1-m^2}{4m} C_k$$

$$m = [1 - (f_\infty/f_c)^2]^{1/2}$$

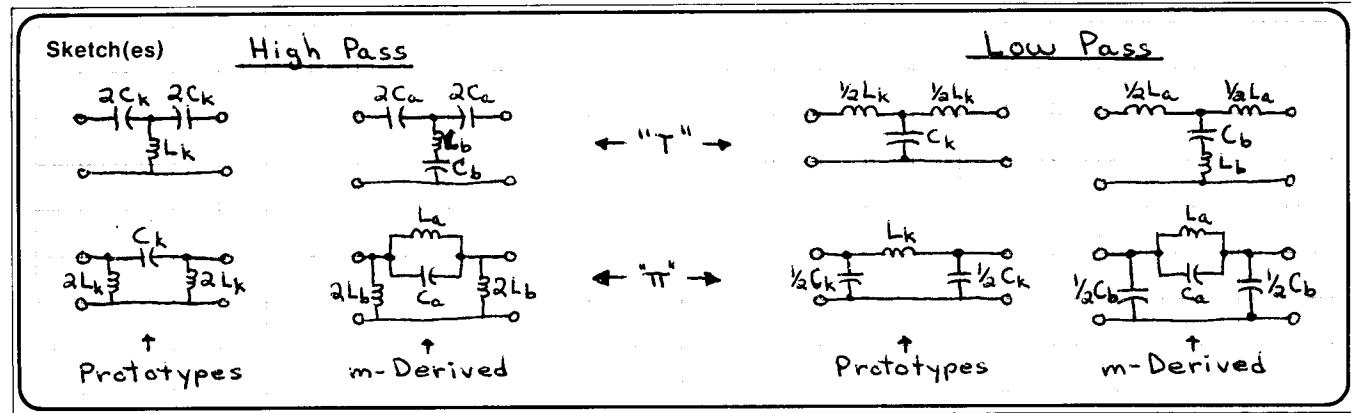

**Variables:**  $f_c$  = Cut-off frequency;  $R$  = Image impedance;  $L$  = Inductance;  
 $C$  = Capacitance;  $f_\infty$  = Frequency of infinite attenuation.

### Operating Limits and Warnings

**Program Description, Equations, Variables** THE 28 STEPS OF THIS SUBROUTINE FIND THE NEAREST

AVAILABLE 1% (2%) RESISTOR FROM WHATEVER VALUE IS ENTERED INTO THE PROGRAM.

WHILE NO SAFEGUARDS ARE BUILT IN TO REJECT UNREAL VALUES, IT IS EXPECTED THAT THE USER WOULD RECOGNIZE THESE AND IGNORE THE OUTPUT. THE PROGRAM FINDS THE GRADE # OF THE INPUT VALUE THEN CALCULATES THE REAL VALUE FOR THAT GRADE. THIS IS DONE BY THE RND FUNCTION WHICH CORRECTS THE CALCULATED GRADE TO A REAL GRADE PRIOR TO FINDING THE RESISTANCE VALUE ASSOCIATED WITH THIS.

A FEW OPTIONS ARE OPEN TO THE USER IN THAT THE LABEL MAY BE CHANGED, THE GRADE # MAY BE DISPLAYED AND THE OUTPUT MAY BE LEFT IN THE FIX MODE. PRESENTLY, THE OUTPUT IS SET TO THE ENG. MODE ALTHOUGH THE PROGRAM INCLUDES THE FIX MODE FOR THE RND FUNCTIONS' OPERATION. STEP ØØ2: FIX, MAY BE DELETED IF THE CALLING PROGRAM PRESETS THE FIX MODE -OR- THE FIX MODE IS USED EXCLUSIVELY IN WHICH CASE STEP Ø27: ENG., MAY BE DELETED ALSO FOR A 26 STEP ROUTINE.

**Operating Limits and Warnings** AN ERROR INDICATION WILL OCCUR IF THE INPUT IS NEGATIVE

AND THAT'S AS IT SHOULD BE. VALUES OVER 10 MEGS ARE NOT AVAILABLE, SO IGNORE THE O/P IF OVER 10 MEGS. ie SELECT A 5% VALUE.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

# Program Description II

## Sketch(es)

(This section contains several blank lines for sketching.)

## Sample Problem(s) A FEW ENTRIES ARE GIVEN AS EXAMPLES:

INPUT	CAL. GRADE.	ACTUAL GRADE.	ACTUAL AVAILABLE VALUE.
3500	52.231	52	(3480) 3.480 03
6300	76.737	77	(6340) 6.340 03
106284	2.541	3	(107000) 107.0 03
312247	47.472	47	(309000) 309.0 03

IT MAY BE NECESSARY TO INCLUDE ANOTHER SUBROUTINE IN THE MAIN PROGRAM TO GIVE THE RESULTANT REAL TIMES, VOLTAGES ETC. BASED ON THESE NEW RESISTANCES. THIS CHANGE FROM CALCULATED TO ACTUAL AVAILABLE VALUES SHOULDN'T BE OVERLOOKED.

THE VALUES GENERATED BY THIS PROGRAM WERE COMPARED TO A CHART OF 1% RESISTORS AND WERE FOUND TO BE ACCURATE.

# Program Description I

**Program Title** Wheatstone Bridge

**Contributor's Name** Harry E. Parshall Jr.

**Address** 3772 Menzie RD SE

**City** Port Orchard

**State** Wash

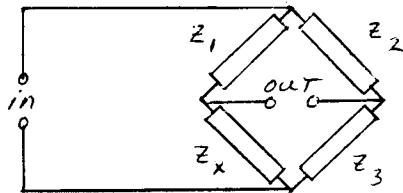

**Zip Code** 98366

## Program Description, Equations, Variables

Given three of the impedances in a basic Wheatstone Bridge, this program computes the fourth. Inputs are: real, polar, or rectangular numbers.

$$z_x = \frac{z_1 z_3}{z_2} / \theta_1 - \theta_2 + \theta_3$$

Rect. inputs are first converted to Polar.

**Operating Limits and Warnings** None

This program has been verified only with respect to the numerical example given in *Program Description II*. ## **NOTES**

## **NOTES**

## **NOTES**

## **Hewlett-Packard Software**

In terms of power and flexibility, the problem-solving potential of the Hewlett-Packard line of fully programmable calculators is nearly limitless. And in order to see the practical side of this potential, we have several different types of software to help save you time and programming effort. Every one of our software solutions has been carefully selected to effectively increase your problem-solving potential. Chances are, we already have the solutions you're looking for.

### **Application Pacs**

To increase the versatility of your fully programmable Hewlett-Packard calculator, HP has an extensive library of "Application Pacs". These programs transform your HP-67 and HP-97 into specialized calculators in seconds. Each program in a pac is fully documented with commented program listing, allowing the adoption of programming techniques useful to each application area. The pacs contain 20 or more programs in the form of prerecorded cards, a detailed manual, and a program card holder. Every Application Pac has been designed to extend the capabilities of our fully programmable models to increase your problem-solving potential.

You can choose from:

**Statistics  
Mathematics  
Electrical Engineering  
Business Decisions  
Clinical Lab and Nuclear Medicine**

**Mechanical Engineering  
Surveying  
Civil Engineering  
Navigation  
Games**

### **Users' Library**

The main objective of our Users' Library is dedicated to making selected program solutions contributed by our HP-67 and HP-97 users available to you. By subscribing to our Users' Library, you'll have at your fingertips, literally hundreds of different programs. No longer will you have to: research the application; program the solution; debug the program; or complete the documentation. Simply key your program to obtain your solution. In addition, programs from the library may be used as a source of programming techniques in your application area.

A one-year subscription to the Library costs \$9.00. You receive: a catalog of contributed programs; catalog updates; and coupons for three programs of your choice (a \$9.00 value).

### **Users' Library Solutions Books**

Hewlett-Packard recently added a unique problem-solving contribution to its existing software line. The new series of software solutions are a collection of programs provided by our programmable calculator users. Hewlett-Packard has currently accepted over 6,000 programs for our Users' Libraries. The best of these programs have been compiled into 40 Library Solutions Books covering 39 application areas (including two game books).

Each of the Books, containing up to 15 programs without cards, is priced at \$10.00, a savings of up to \$35.00 over single copy cost.

The Users' Library Solutions Books will compliment our other applications of software and provide you with a valuable new tool for program solutions.
